

United Kingdom Biology Competitions (UKBC) **Intermediate Biology Olympiad (iBO)**

Registration not yet open

The Intermediate Biology Olympiad (iBO) is organized by the United Kingdom Biology Competitions (UKBC) and by taking part in this prestigious competition, students can see this as an opportunity to enhance the attractiveness of their university applications for the relevant courses. Last year, the competition saw participation from almost 15,113 students around the world.

The problems are designed to make students think critically which will require intuition, logic, and imagination to answer. Students are also expected to apply basic principles which they are familiar with to new topics. On a side note, UKBC continues to develop new competition items to challenge students, involving scientists conversant with cutting-edge biology.

This is a good opportunity for the students to gain exposure to the rigour of the science competition in the United Kingdom and pit their skills against other participants around the world.

Further details to be provided when available.
